

CLAIMS

The embodiments of the invention in which I claim an exclusive property or privilege are defined as follows:

What I claim as my invention is:

1. A voluntary disclosure system for allowing users to place themselves under reduced suspicion by volunteering to disclose personal information, said voluntary disclosure system comprising:
 - a voluntary disclosure fixture for being voluntarily used by some of said users;
 - a user-specific non-suspiciousness accumulator for being initialized prior to usage of said fixture by each user of said fixture;
 - recording or observing means for recording or observing personal information of at least a portion of users of said fixture, during usage of said fixture,said non-suspiciousness accumulator being incremented through usage of said fixture.
2. The voluntary disclosure facility of claim 1 where use of said fixture is for undergoing a medical examination in a medical examination booth, said recording or observing means being for viewing by medical staff at a remote site, or at a later time.
3. The voluntary disclosure facility of claim 1 where use of said fixture is for undergoing a medical examination in a medical examination booth, said medical examination booth including deposit facilities for collection of one or more of: a blood sample; urination sample; defecation sample; sperm sample; DNA sample; hair sample; skin scrape sample.
4. The voluntary disclosure facility of claim 3 in which said fixture includes a curved surface made from one of:
 - smoked polycarbonate;
 - smoked glass;

- partially transparent material,

said fixture having one or more image sensors concealed behind said surface, said surface for seating of one of said users undergoing said medical examination, said surface having one or more openings to receive said sample, said fixture including a processor responsive to an output from said image sensors, said processor automating at least one aspect of a process in undergoing said medical examination.

5. The voluntary disclosure facility of claim 1 in which said fixture includes a curved surface made from one of:

- smoked polycarbonate;
- smoked glass;
- partially transparent material,

said fixture having image sensors concealed behind said surface, said surface for seating of one of said users undergoing said medical examination.

6. The voluntary disclosure facility of claim 1 where use of said fixture requires the removal of at least some clothing, said recording or observing means arranged for recording or observing users of said facility in a state of being not fully clothed.

7. The voluntary disclosure facility of claim 1 further including at least one locker room, in which at least some of said users undress and give their clothes to a locker room attendant for safe keeping, said recording or observing means including a scanner for scanning said clothes.

8. A spa facility incorporating the voluntary disclosure facility of claim 1, in which said fixture is at least one spa fixture from the list of:

- a whirlpool bath;
- a steam room;
- a sauna;
- a shower,

said recording or observing means including the inspection of users of said spa fixture by an attendant of said spa facility.

9. A terrorist-reduction cost-sharing airport spa facility incorporating the voluntary disclosure facility of claim 1, in which said fixture is at least one spa fixture from the list of:

- a whirlpool bath;
- a steam room;
- a sauna;
- a shower,

said recording or observing means including the inspection of users of said spa fixture by an attendant of said spa facility, said spa facility further including a tracking system for tracking the extent of bodily disclosure of users of said spa facility, and for tracking costs savings arising from suspiciousness reductions associated with said disclosure, said spa facility being provided at reduced or zero cost to users, based on said costs savings.

10. A method for running a voluntary disclosure system for allowing users to place themselves under reduced suspicion by volunteering to disclose personal information, said method comprising the steps of:

- offering users the opportunity to use a voluntary disclosure fixture;
- keeping, for each potential user, a user-specific non-suspiciousness accumulator, and initializing said non-suspiciousness accumulator prior to usage of said fixture by each user of said fixture;
- recording or observing personal information of at least a portion of users of said fixture, during usage of said fixture;
- incrementing said non-suspiciousness accumulator in response to usage of said fixture.

11. The voluntary disclosure method of claim 10 in which said fixture is installed for use by passengers in an airport.

12. The voluntary disclosure method of claim 10 in which said fixture is at least one spa fixture from the list of:

- a whirlpool bath;
- a steam room;
- a sauna;
- a shower,

said recording or observing means including the inspection of users of said spa fixture by an attendant of said spa facility, said method further including the the step of tracking of the extent of bodily disclosure of users of said spa facility, and the step of tracking costs savings arising from suspiciousness reductions associated with said disclosure, said method also including the step of providing usage of said spa fixture at reduced or zero cost to users, based on said costs savings.

13. A voluntary disclosure device for allowing users to place themselves under reduced suspicion by volunteering to disclose personal information, said voluntary disclosure device comprising:

- a voluntary disclosure input for being voluntarily used by some of said users;
- a user-specific non-suspiciousness accumulator for being initialized prior to usage of said input by each user of said input;
- recording or observing means for recording or observing personal information of at least a portion of users of said input, during usage of said input,

said non-suspiciousness accumulator being incremented through usage of said input.

14. The voluntary disclosure device of claim 13 in which said device is a body scanner for scanning the unclothed body of a user, said input being the disclosure of the naked body to said device.

15. The voluntary disclosure device of claim 13 in which said device is a retinal scanner, said input being the disclosure of the naked eye to said device.
16. The voluntary disclosure device of claim 15, said retinal scanner incorporated into a virtual reality headset for being used in a video game, said disclosure being made in conjunction with the playing of said video game.
17. The voluntary disclosure device of claim 13 in which said device is a fingerprint scanner, said input being the disclosure of the surface of at least one finger to said device.
18. The voluntary disclosure device of claim 17, said fingerprint scanner incorporated into a pushbutton device, said pushbutton device having a concomitant effect in addition to being a fingerprint scanner.
19. The voluntary disclosure device of claim 17, said fingerprint scanner also being for a game, such that a feature of the game is activated by pressing on said fingerprint scanner.
20. The voluntary disclosure device of claim 17 further including a matcher for matching scanned fingerprints with previously stored fingerprints, and an incrementer for awarding non-suspiciousness points in respect to a first time enrolee, and an incrementer for awarding non-suspiciousness points for a second time enrolee, and a detention indicator to indicate that a user should be detained, said selection from among said awarding non-suspiciousness points in respect to a first time enrolee, said awarding non-suspiciousness points for a second time enrolee, and said indicator, being responsive to an output of said matcher.
